

## Short & Soft Field Landings

Cherokee settings, Archer settings are highlighted

### ➤ Short Field Landings

- Downwind & Base are identical to normal landings
- On final configure for 70mph **62kts**
- Aim for threshold instead of numbers
- Touchdown on the numbers +200' **-0** (DO NOT LAND SHORT)
- Max mechanical braking without locking the wheels
- Max aerodynamic braking
  - Flaps up
  - Yoke back

### ➤ Soft Field Landings

- Downwind & Base are identical to normal landings
- Final is identical to normal landings
- On roundout, hold the nose off the ground as long as possible, increasing back pressure to just above stall speed
- After touchdown continue to hold the yoke back and keep the nose wheel off the ground
- Rudder pedals to maintain directional control
